

# VIRTIGATION – Emerging viral diseases in tomatoes and cucurbits: Implementation of mitigation strategies for durable disease management

## Deliverable 2.1 Sample descriptor list

<b>Due Date:</b>	30 <sup>th</sup> November 2021
<b>Submission Date:</b>	12 <sup>th</sup> December 2021
<b>Dissemination Level:</b>	CONFIDENTIAL (CO)
<b>Lead beneficiary:</b>	KU Leuven
<b>Author:</b>	<p>Hervé Vanderschuren: <a href="mailto:herve.vanderschuren@kuleuven.be">herve.vanderschuren@kuleuven.be</a></p> <p>Victor Golyaev: <a href="mailto:victor.golyaev@kuleuven.be">victor.golyaev@kuleuven.be</a></p> <p>Jasmine Zorrilla: <a href="mailto:jasmine.zorrilla@kuleuven.be">jasmine.zorrilla@kuleuven.be</a></p>
<b>Project acronym:</b> VIRTIGATION	<b>Project Number:</b> 101000570
<b>Start date of project:</b> 1 <sup>st</sup> June 2021	<b>Project duration:</b> 48 months, until 31 <sup>st</sup> May 2025

received funding from the European Union's Horizon 2020 research and innovation  
 under grant agreement No 101000570. This output reflects only the author's view and the  
 cannot be held responsible for any use that may be made of the information contained

## 1 PUBLISHABLE SUMMARY

The deliverable 2.1 includes the list of biological descriptors that will be used to determine the origin, negative impact and dissemination of plant viruses. The information about virus origin, host plant age and species, associated disease, symptoms observed on host plant, virus spread, etc. provided by stakeholders will be corroborated by in-depth analysis of collected samples using High Throughput Sequencing (HTS). As a result, the factors that could affect the viral emergence and spread will be selected.
